Objective

AI/ML Engineer with hands-on experience in developing intelligent applications using Machine Learning, Deep Learning, Natural Language Processing, Computer Vision, and Large Language Models. Experienced in building AI chatbots, Retrieval-Augmented Generation (RAG) systems, and AI-powered document processing solutions through industry and personal projects. Passionate about building scalable AI applications and solving real-world problems.

Education

Bachelor of Science in Computer System Engineering ——— Mirpur University of science and Technology(MUST)
Sep 2021 – Aug 2025

Work Experience

AI/ML Engineer ——— **National Telecommunication Corporation (NTC)** ——— Apr 2026 — Present
Responsibilities included:

- Developed AI-powered chatbot solutions for customer support applications.
- Built document-based AI systems using Retrieval-Augmented Generation (RAG).
- Designed and implemented end-to-end AI application workflows.
- Integrated vector databases and backend databases for AI applications.
- Collaborated on the development and testing of local LLM-based solutions.

Technical Projects

- **AI Customer Support Chatbot:** Developed an AI-powered chatbot to collect customer queries and automatically generate structured PDF forms based on user requirements. Improved the customer support workflow by organizing client information into standardized documents.
- **Document-Based RAG Chatbot:** Built a Retrieval-Augmented Generation (RAG) chatbot to answer user queries using organization-specific documents. Implemented document retrieval, semantic search, and local LLM inference to provide accurate and context-aware responses.
- **Context-Aware AI Chatbot:** Developed a conversational AI chatbot capable of maintaining conversation history across multiple interactions. Implemented context management to generate coherent, relevant, and personalized responses during ongoing conversations.
- **YOLO-Based Object Recognition System:** Developed a computer vision application using the YOLO model to detect and recognize multiple objects from images and video streams. Performed object localization, classification, and real-time inference with high detection accuracy.
- **Email Spam Detection System:** Built an NLP-based email classification system to identify spam and legitimate emails. Applied text preprocessing, feature extraction, and machine learning algorithms to improve classification performance and reduce false predictions.
- **Heart Disease Prediction System:** Developed a machine learning classification model to predict heart disease risk using patient health data. Performed data preprocessing, feature selection, model training, and evaluation using standard classification metrics.
- **Rice Crop Disease Detection System:** Built an AI-powered crop disease detection system to classify healthy and diseased rice leaves using transfer learning. Implemented image preprocessing, data augmentation, and model training with PyTorch, OpenCV, NumPy, and pre-trained CNN models.

Skills

- **Languages:** Python, SQL
- **Libraries & Frameworks:** Scikit-learn, PyTorch, Pandas, NumPy, Matplotlib, Seaborn
- **AI & ML:** Machine Learning, Deep Learning, NLP, Computer Vision, LLMs, RAG
- **Databases:** PostgreSQL, ChromaDB
- **Tools:** Git, GitHub, Hugging Face, Ollama, Docker
